### Product Advantages

- ✓ ***Made from the Cleanest Paper that is contaminant-free***
  - National Fiber uses very clean sources of paper, primarily over-issue newsprint.
  - Cel-Pak is carefully fiberized to optimize coverage and performance.
  - Our Cel-Pak insulation is free from plastic and foreign matter that can damage your machine and reduce coverage.
    - Other companies use a co-mingled paper source that allows plastic bags, strapping and other non-cellulose materials into the product. This reduces coverage, clogs hoses and damages machines.
- ✓ ***National Fiber uses only 100% Borate***
  - A 100% Borate-infused cellulose insulation is considered the best in the industry.
    - Products that contain Ammonium Sulfate can produce an ammonia smell that lingers in the house.
    - In some situations, Ammonium Sulfate can be corrosive to metal.
  - Borate provides fire, insect and mold resistance.
  - Borate is harmless to humans and is used commercially in eyewash and cosmetics.
- ✓ ***National Fiber's Cel-Pak Cellulose has better coverage rates***
  - We carefully fiberize our product to maximize the coverage.
  - Because we use only the best paper, our coverage rates are better than many other cellulose insulations.
    - Other maker's insulation can have lower coverage rates due to foreign matter (plastic and strapping do not fiberize).
- ✓ ***National Fiber's Cel-Pak Qualifies for the Federal Income Tax Credit***
  - National Fiber is US Lab approved, which is required for the current stimulus package funds.
  - Foreign competitors don't always have the US Lab approval stamped on the bag, which is required for acceptance.
- ✓ ***Manufactured in Belchertown, MA***
  - National Fiber is the only Cellulose insulation manufacturer in New England.
  - In 2008, National Fiber recycled 35 million lbs. of paper from the Northeast.
  - In business for over 40 years, National Fiber will be here to support you.
